Assignment 1

Using String Functions in PHP

- **strtoupper()**

```
<?php
$name = "gurpreet jhamat";
$name_in_uppercase = strtoupper($name);
echo "Name: ", $name_in_uppercase;

?>

// GURPREET JHAMAT
```

- **strtolower()**

```
<?php
$name = "GURPREET JHAMAT";
$name_in_lowercase = strtolower($name);
echo "Name: ", $name_in_lowercase;

?>

// gurpreet jhamat
```

- **strlen()**

```
<?php
$name = "gurpreet";
$name_length = strlen($name);
echo "Length of name: ", $name_length;

?>

// 8
```

- **str_word_count()**

```
<?php
```

```
$line = "I am learning PHP!";
```

```
$no_of_words = str_word_count($line);
```

```
echo "No of words in a line: ", $no_of_words;
```

```
?>
```

```
// 4
```
