

INTEGRATION PROJECT

Website: - **urbandine.com**

Client Presentation

Made By: -

Gurveer Sandhu

Gurpreet Jhamat

CLIENTS NEEDS

The client wants us to make his website to display all the dishes he have at his restaurant. He wants his business to reach people in his area with the help of internet. At minimum, he wants his website to include the restaurant address, phone number, menu, and some photos of the food and dining area. The other thing the client wants is the design i.e., user interface of the website should be simple with a great user experience.

RESEARCH AND PLANNING

- The first step in designing a successful web site is to gather information. Many things need to be taken into consideration when the look and feel of your site is created.
- This first step is actually the most important one, as it involves a solid understanding of the company it is created for. It involves a good understanding of you what your business goals and dreams are, and how the web can be utilized to help you achieve those goals.
