

Digital Photography – Assignment 4

Ans1: A mode dial or camera dial is a dial used on digital cameras to change the camera's mode.

Ans2: **Portrait mode:-** Portrait mode will “think” that there is a subject in the foreground of the frame and choose a shallow depth of field to keep the human subject in focus but the background blurred.

Landscape mode:- Landscape mode usually uses a small aperture (high f/number) to create a well-focused image from the foreground into the distance. Landscape mode tends to suit a wide lens and works well if the scene is well lit.

Action mode:- Because actions are fast-paced activities, action mode will give you a high shutter speed of at least 1/500 – 1/1000 of a second. With a high shutter speed to freeze movement, means that the flash is usually not necessary – though once again this works best on a bright day.

Macro Mode:- Macro mode is very useful for taking photographs of subjects smaller than your hand.

Ans3: Landscape Pictures Example:

Portrait Mode Example:
