Integration Project

Mid Term

Q: Create a report describing the things you have done till now in INTEGRATED PROJECT course.

This course includes two students to create a web development project assigned by our teacher. There is different phase for this project which will be validated by the teacher along the way.

First during the start of the project we have to answer some of the mandate definition and research questions which include clients needs, expecttaions, period and budget etc. Then we created a flow chart for the content of different pages of the website i.e., HOME, MENU, RESERVATIONS, ABOUT and CONTACT. We explain what we are going to add in each page of the website.

The next phase wants us to make a production script in which we have to mention the whole content of the website according to each page. All the headings and text are shown in this script. Along with that any kind of feature and programming part is also explained in the script. Also the images to be used in the website are to be described in the script.

Then we created a chart explaining the whole time it takes us to do the things above mentioned, timing, date, days, and total hours is to be mentioned there. This chart helps us to decide the total price to create the website which we added in quotation we made at the end. Then we created a presentation for the client to explain him everything.
